ABSTRACT

Meteorological data gathered for the launching of Nike-Hydac STV (SR-071), are presented for the Space and Missile Systems Organization and for ballistic studies. The data appear, along with calculated ballistic data, in tabular form.

INTRODUCTION

Nike-Hydac STV (SR-071), was launched from Launch Complex 33, L-314, White Sands Missile Range (WSMR), New Mexico, at 0614 hours MDT, 12 August 1968.

Meteorological data used in conjunction with theoretical calculations to predict rocket impact were collected by the Meteorological Support Technical Area, Atmospheric Sciences Laboratory (ASL), WSMR, New Mexico. The Ballistics Meteorologists for this firing were Gordon L. Dunaway and John M. Sharpe.

DISCUSSION

Wind data for the first 216 feet above the surface were obtained from a system composed of five Aerovanes mounted on a 200-foot tower and cabled to two component wind indicators for each level.

From 216 to 4,000 feet above the surface, wind data were obtained from T-9 tracked balloon ascents.

Temperature, pressure, and humidity data, along with upper wind data from 4,000 to 100,000 feet above the surface, were obtained from standard rawinsonde observations.

Mean wind component values in each ballistic zone were determined from vertical cross sections by the equal-area method.

Theoretical rocket performance values and ballistic factors as a function of altitude were provided by ASL and are the basis for data appearing in Table I.

PAYIOAD		218	Pounds

13. ABSTRACT			
Y	C M 1	c Mate v	(m.) - 073 (cp. 071)
Meteorological data gathered	for the Launching	; or Nike-n	iydac SIV (SK-U/I)
are presented for the Space and Mi	ssile Systems Org	ganization	and for parification
studies. The data appear, along w	ith calculated ba	illistic da	ica, in cabular
form.
